 Electric

# Quick access to Product information

## Select your Catalog, your Training

With just 3 clicks, you can reach the 7,000 pages of the Industrial Automation & Control catalog, in both English and French.

- Digi-Cat is available on a USB key (for PC). To get your Digi-Cat, please contact your local center
- Download Digi-Cat from this address:

<http://digi-cat.schneider-electric.com/download.html>

### Find your training

- Find the right training for your needs
- Locate the training center with the selector tool, using this address:

<http://www.schneider-electric.com/b2b/en/services/training/technical-training.jsp>

then click on

### Empowering industrial OEMs for the digital era

To be competitive in today's digital era, machine builders must be innovative. Smart machines, those that are better connected, more flexible, more efficient, and safe, are enabling machine builders to innovate in ways never before possible.

- > EcoStruxure™ Machine, our open, interoperable, IoT-enabled system architecture helps you build smarter machines and equipment faster, making your business more efficient, profitable, and sustainable.
- > EcoStruxure Machine brings together key technologies for product connectivity and edge control on premises, and cloud technologies to provide analytics and digital services.
- > EcoStruxure Machine helps you bring more innovation and added value to your customers throughout the entire machine life cycle

### Lexium 28 is part of EcoStruxure Machine

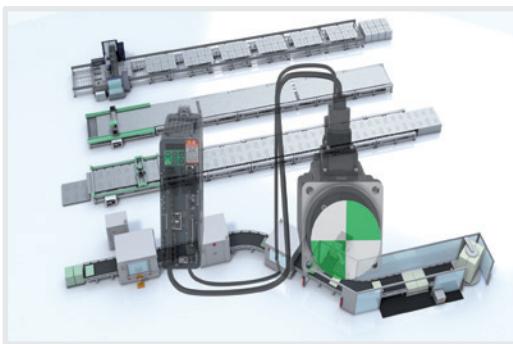

**Compact / Hardwired / Logic Controller Modicon M241**

#### Solution Breakdown

- 1 Compact NSX circuit breaker
- 2 IEM32 energy meter
- 3 Phaseo switch mode power supply
- 4 Modicon TM4 Ethernet switch module
- 5 Modicon M241 logic controller
- 6 Modicon TM3 functional safety module
- 7 Modicon TM3 I/O expansion module
- 8 Harmony XALK emergency stop
- 9 Magelis STO/STU HMI
- 10 Harmony XB5R wireless and batteryless pushbutton, configurable access point
- 11 Harmony XB4/XB5 Control & signaling units
- 12 Preventa XCS safety switch
- 13 Altivar 32 variable speed drive
- 14 Lexium 28 Servo Drive, BCH2 servo motor
- 15 Telemecanique sensors®: proximity & photoelectric sensors, limit switch, encoder
- 16 Zelio Relay solid-state relay
- 17 TeSys D switch connector fuse
- 18 TeSys GV2L magnetic circuit breaker
- 19 TeSys GV2M/3P D.O.L. / reversing starter

### Lexium 28 & BCH2: optimized servo bundles for compact machines

### Intuitive commissioning & programming

EcoStruxure Machine Expert configuration software

SoMove Setup software

### Servo range with best-in-class performance

The predefined servo bundles of Lexium 28 servo drive & BCH2 servo motor are optimized for easy integration & commissioning in your machine. It includes standard interfaces, embedded safety function and DC-bus sharing.

- > CANopen / CANmotion and EtherCAT
- > Pulse Train

### Reduce your time to market

- > Automatic tuning and motor identification
- > PLC open motion library

### Increase profitability

- > Designed for optimized & cost effective solutions
- > Drive embedded safety function: Safe-Torque-Off

### Improve efficiency

- > Energy efficient because of DC-bus sharing
- > Predefined servo bundles to fit each machine type

### Simplify integration & maintenance

#### LXM28A●●● servo drives

- > Standard fieldbus interface CANopen / CANmotion
- > Pulse-train-input (PTI) and Pulse-train-output (PTO) interfaces
- > Digital input interface to control simple movements directly by the servo drive: Position sequence mode
- > Analog input interface +/-10 V for speed control mode

#### LXM28E●●● servo drives

- > Standard fieldbus interface EtherCAT
- > Pulse-train-output (PTO) interface
- > Digital input interface for sensor signals such as fast capture signals, limit switches and homing sensors
- > Servo drive embedded safety function Safe-Torque-Off (STO)

### Achieve benchmark performance while increasing profitability

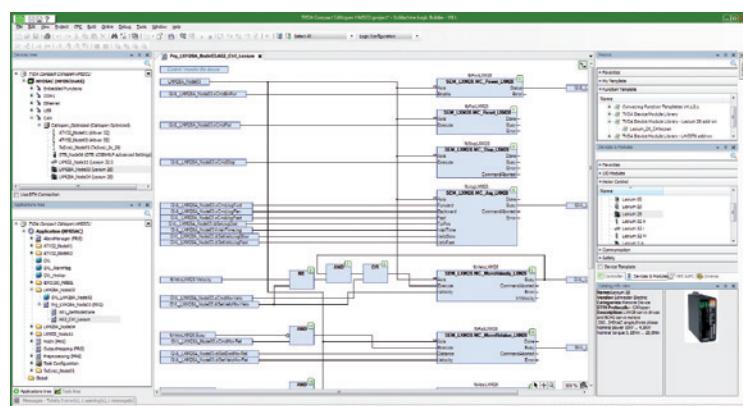

Lexium 28 and Lexium BCH2, the optimized servo bundle for motion control solutions

- > Cost effective
- > Energy efficient
- > Embedded safety

### EcoStruxure Machine Expert - One software for commissioning and programming

EcoStruxure Machine Expert is the universal programming software for machines automated by EcoStruxure Machine controllers. Simple navigation that requires only fewer clicks delivers a more efficient engineering process. The programming, visualization, and commissioning are handled in just one intuitive tool. SoMachine software includes a 21 day free trial. After this period a license is required to continue to benefit from SoMachine. It can be installed from a DVD.

Please consult on our web site [www.schneider-electric.com](http://www.schneider-electric.com)

### SoMove Setup software

In addition to EcoStruxure Machine Expert the SoMove Setup software can be used for the commissioning of Lexium 28. This could be done in just the same way as it is on other Schneider Electric drives and starters, to configure, adjust, debug, and maintain the drive.

Material working application

Material handling application

Packaging application

Textile application

SoMove Setup software

Multi-loader tool

### Presentation

The Lexium 28 range is defined by AC-servo drives LXM28 for combination with AC-servo motors BCH2.

- The Lexium 28 range offers predetermined combinations to suit the requirements of motion control applications, and optimize installation's performance.
  - The combinations of servo motors with servo drives are based on the power class: both servo motor and servo drive have the same power class.
  - The bundle of a servo drive with its related servo motor is designed to cover a nominal power from 0.05 kW up to 4.5 kW (*0.067 up to 6.03 hp*) with 200...240 V mains supply voltage.
- The Lexium 28 servo drives are delivered without EMC filter, the EMC immunity is reached with additional EMC filter.
- The Lexium 28 servo drives have degree of protection IP 20.
- BCH2 motors provide a nominal torque from 0.16 Nm to 28.6 Nm and a nominal speed of from 1,500 to 3,000 rpm, depending on the model. They are suitable for a wide variety of applications due to the different levels of motor inertia offered.

### Compact range

The compact dimensions of Lexium 28 servo drives mean they fit very easily into small spaces, thus reducing the size of the installation and the cost of the equipment.

### Applications

- Material working (multi-axis machines, cutting machines, etc.)
- Material handling (conveying, palletizers, warehousing, etc.)
- Assembly line (clamping, etc.)
- Packaging
- Printing
- Winding and unwinding

### SoMove Setup software

SoMove Setup software is used for commissioning, parameter setting, diagnostics and maintenance.

The drives can be configured

- via their integrated HMI interface
- using the SoMove Setup software.

It can also be used for fast device replacement in existing machine installations.

SoMove Setup software is used in just the same way as it is on other Schneider Electric drives, for configuring and optimizing control loops in automatic or manual mode using the Oscilloscope function and for maintenance of the Lexium 28 drive. See page 10.

### Multi-loader tool

The Multi-loader tool enables configurations to be copied from a PC or a servo drive and loaded onto another servo drive. The servo drives do not need to be powered-up (see page 10).

### Flexibility

- LXM28A●●● servo drives have digital and analog I/O as standard, an interface for CANopen/CANmotion fieldbus and an encoder interface for BCH2 servo motors.
- LXM28E●●● are controlled through the field bus interface EtherCAT.

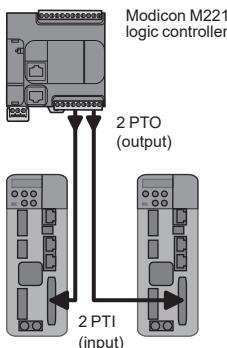

The servo drives incorporate numerous functions, including auto-tuning, position, speed, torque control.

LXM28A●●● drives can be used with drive embedded "position sequence mode", controlled through digital input signals.

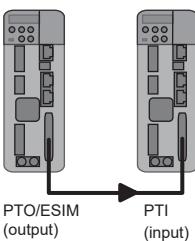

This open communication concept enables integration into numerous different control system architectures.

### Mounting and maintenance

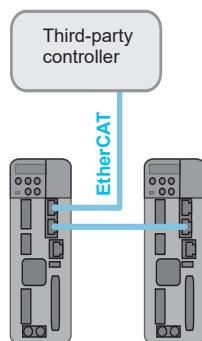

Connecting the servo drives is simplified by identified plug-in connectors, which are easily accessed, mainly on the front panel and also on top of the drive (see Description page 9).

Example of architecture with two LXM28A\*\*\* servo drives controlled by Modicon M221 logic controller

Example of a LXM28A\*\*\* servo drive via PTO/ESIM interface, controlling another LXM28A\*\*\* servo drive with PTI interface

Example of EtherCAT architecture with two LXM28E\*\*\* servo drives controlled by a third-party controller

PTO: pulse-train-output  
ESIM: encoder simulation output. The servo drive provides its motor position through this electrical interface to another device.  
PTI: pulse-train-input interface

**Guard monitoring** safety function held by Lexium 28 servo drives.  
More details on our web site [Machine Safety Solution](#)

### Main functions of Lexium 28 servo drives

- Automatic motor identification by the servo drive: the technical data related to the motor is provided from the motor to the drive via the encoder connection cable.
- Filtering: Anti-vibration function for suppression of resonance frequencies of the power train connected with the moving mass of the application
- Monitoring functions:
  - Status monitoring, I/O monitoring
  - Log function to memorize alarm and warning messages (in the drive)
  - Reset function of alarms and warnings
  - Monitoring of drive variables related to motor control and closed loop control
- **Additional main function:** Movement control with digital input interface directly in the servo drive:
  - Relative or absolute positioning mode
  - Velocity mode
  - Torque control mode
  - Position sequence mode: a sequence of up to 32 movements, controlled by a digital input interface

### Control via I/O interface or fieldbus

LXM28A\*\*\* servo drives are controlled through “CN4 CAN” interface with a CANopen/CANmotion fieldbus control interface. They can also be controlled through numerous digital and analog signals, accessible by “CN1 I/O” interface:

- 2 digital inputs for high performance position capture
- 8 digital inputs
- 5 digital outputs
- 2 analog inputs
- 2 analog outputs
- 1 digital input channel (2 wires) for the safety function “Safe-Torque-Off”

LXM28E\*\*\* servo drives are controlled through “CN4 Eth” interface with an EtherCAT fieldbus control interface. They can also be controlled through numerous digital and analog signals, accessible by “CN1 I/O” interface:

- 2 digital inputs for high performance position capture
- 8 digital inputs
- 5 digital outputs
- 1 digital input channel (2 wires) for the safety function “Safe-Torque-Off”

### Drive functions activated by commissioning software or directly by the HMI interface

- Jog mode: Velocity movement
- “Easy tuning” one-button tuning mode: this function is used to optimize application performance.
- 2 additional tuning functions, which can be activated by the SoMove Setup commissioning software or by the HMI interface:
  - “Comfort tuning” with predefined settings for different mechanical systems such as spindle axes (e.g. portal axes), transportation belt, vertical axes (e.g. cantilever axes)
  - “Auto-adaptive tuning”

### Operating modes

#### Operating modes for LXM28A\*\*\* servo drives via PTI/PTO interface

- Lexium 28 drives movement can be managed by a machine controller (Modicon M221 logic controller) with pulse-train-output (PTO) interface or the PTO interface from another (Lexium28) servo drive.
- The corresponding pulse-train-input (PTI) of the LXM28A\*\*\* drive is then electrically connected to CN1 I/O interface.

#### Operating modes for LXM28A\*\*\* or LXM28E\*\*\* servo drives via the CANopen and CANmotion fieldbus and for LXM28E\*\*\* servo drives via EtherCAT field bus

- Homing
- Point-to-point mode
- Position gear mode
- Cyclic synchronous position mode, cyclic synchronous velocity mode, cyclic synchronous torque mode

For more details of each integrated function, please consult our web site: [www.schneider-electric.com](http://www.schneider-electric.com).

### Embedded safety function STO

The Lexium 28 range of servo drives is an integral part of the Machine safety system “Preventa” solutions for efficient machine safety” with its drive embedded Safe-Torque-Off (STO) function. This STO function meets the requirements of SIL 2 according IEC 61800-5-2 / IEC62061 / IEC 61508 as well as up to category 3 and PL d according to EN ISO 13849-1. It simplifies the setup of installations requiring complex safety equipment and improves performance during maintenance operations.

### LXM28A servo drives

#### Description

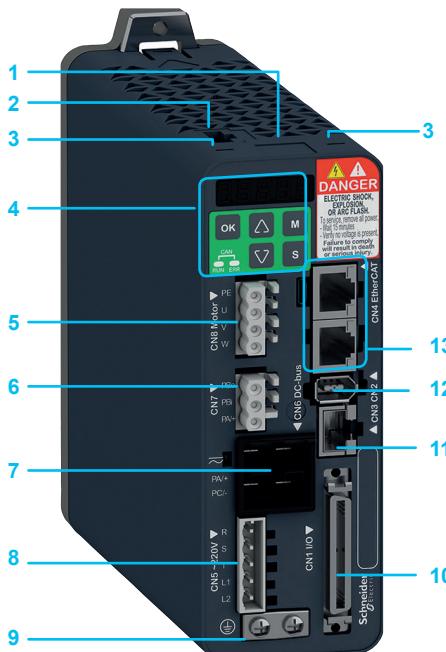

##### On the drive top side:

- 1 QR code for access to detailed technical data, wiring guide, and installation guide
- 2 Removable terminal (1) for STO function (marked "CN9")
- 3 Slot for application name plate

##### On the drive front side:

- 4 HMI interface, 7-segment display, 5 buttons (OK, mode, set, value up, value down) and servo drive status LED
- 5 Removable terminal block (1) for motor connection (marked "CN8 Motor")
- 6 Removable terminal block (1) for braking resistor connection (marked "CN7")
- 7 DC-bus connector with status LED "DC-bus charged" (marked "CN6 DC-bus")
- 8 Removable terminal block(1), 5 terminals (R, S, T, L1, L2) for connecting the 220 V  $\sim$  power supply (marked "CN5 ~ 220 V")
- 9 Protected earth connector (marked " $\ominus$ ")
- 10 Input/output interface connector (marked "CN1 I/O")
- 11 2x RJ 45 connectors for CANopen/CANmotion fieldbus connection (marked "CN4 CAN")
- 12 Connector for motor encoder: 20-bit single-turn or multi turn absolute encoder, type ServoSense® (marked "CN2 E")
- 13 RJ 45 connector for Modbus serial link (marked "CN3 Modbus")

(1) Removable spring terminals are supplied with each Lexium 28 servo drive.

Configuration with the SoMove Setup software

TCSMCNAM3M002P

#### SoMove Setup software

##### **Presentation**

SoMove Setup software is used on Lexium 28 servo drives in just the same way as it is on other Schneider Electric drives and starters, to configure, adjust, debug, and maintain the drive.

The configuration of Lexium 28 servo drives can be done using the USB/RJ 45 cordset TCSMCNAM3M002P (used between the PC and the Lexium 28, on CN3 interface).

SoMove Setup software can be downloaded from our web site: [www.schneider-electric.com](http://www.schneider-electric.com)

More information: see catalog "SoMove Setup software" (DIA2ED2140801EN) on our web site: [www.schneider-electric.com](http://www.schneider-electric.com)

#### Options: braking resistors for servo drives

##### Presentation

##### Internal braking resistor

A braking resistor is built into the servo drive to absorb the braking energy. If the DC-bus voltage in the servo drive exceeds a specified value, this braking resistor is activated. The restored energy is converted into heat by the braking resistor. It enables maximum transient braking torque.

##### External braking resistor

When the servo motor has to be braked frequently, an external braking resistor is required to dissipate the excess braking energy. In this case, the internal braking resistor must be deactivated.

Several external braking resistors can be connected in parallel. The servo drive monitors the power dissipated in the braking resistor.

The casing degree of protection is IP 65 for VW3A7601R $\bullet\bullet$  to VW3A7607R $\bullet\bullet$  braking resistors and IP 20 for VW3A770 $\bullet$  braking resistors.

The operating temperature around the unit can be between 0 and + 50 °C (+ 32 and + 122 °F).

To optimize the size of the braking resistor, the DC-buses on Lexion 28 servo drives in the same installation can be connected in parallel.

##### Applications:

Machines with high inertia, driving loads, and machines with fast cycles.

#### References

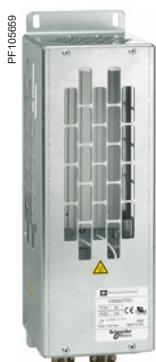

##### External braking resistor

Communication on CANopen/CANmotion fieldbus with LXM28A●●● servo drives

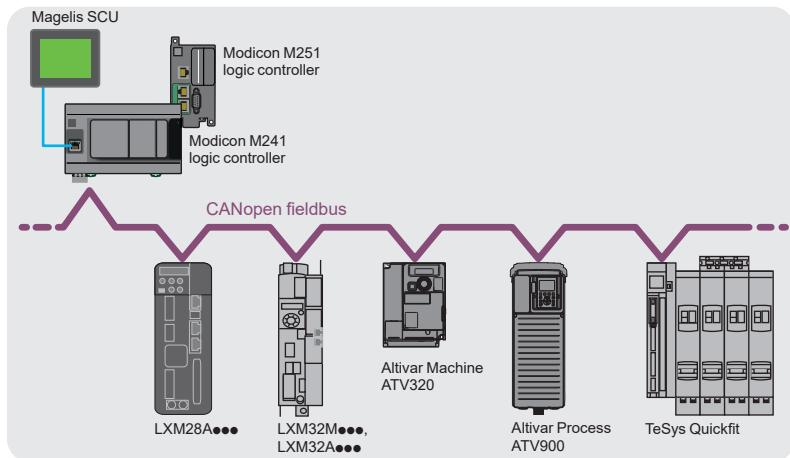

Examples of architectures with control by Modicon M241/M251 logic controllers or LMC058 motion controller

### CANopen/CANmotion fieldbus for LXM28A●●● servo drives

#### Presentation

LXM28A●●● servo drives integrate the CANopen communication protocol as standard.

LXM28A●●● servo drives can be directly connected to CANopen/CANmotion fieldbus using the RJ 45 connectors. The communication function provides access to the servo drive's configuration, adjustment, control, and monitoring functions. To simplify daisy chain connection, each servo drive is equipped with two RJ 45 connectors (marked CN4 CAN).

## Lexium 28 servo drives

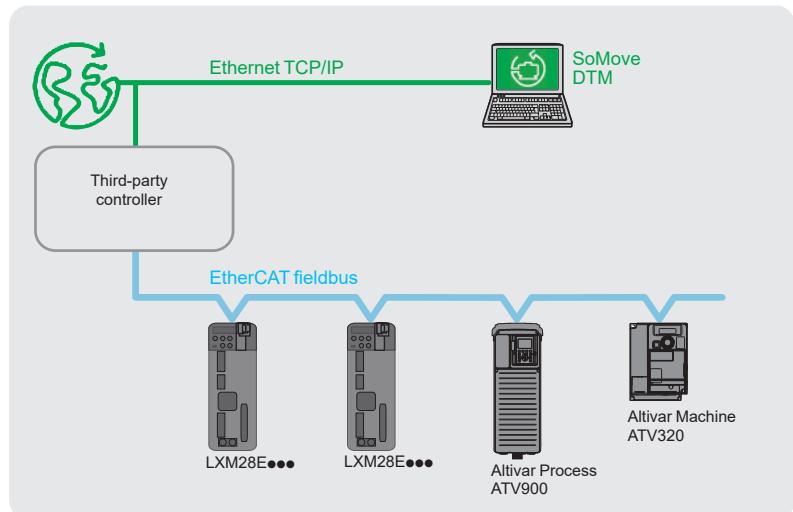

Communication on EtherCAT fieldbus with LXM28E●●● servo drives

### EtherCAT fieldbus for LXM28E●●● servo drives

#### Presentation

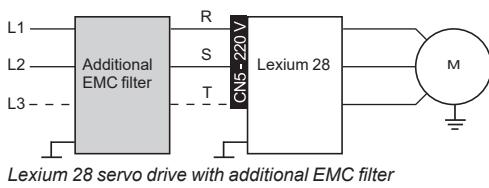

EtherCAT (EtherNet for Control Automation Technology) is an EtherNet-based open fieldbus system. This means that EtherNet technologies, such as embedded Web server, e-mail, and FTP transfer, can be used in the EtherCAT environment. The EtherCAT fieldbus is intended for applications requiring very short cycle times ( $\leq 250 \mu\text{s}$ ) with low jitter ( $\leq 1 \mu\text{s}$ ) for synchronization purposes

LXM28E●●● servo drives can be directly connected to EtherCAT fieldbus using the RJ 45 connectors. The communication function provides access to the servo drive's configuration, adjustment, control, and monitoring functions..

#### Additional EMC input filters for servo drives

##### Presentation

Lexium 28 servo drives require external input filters to comply with the EMC standard for variable speed electrical power drive "products" IEC/EN 61800-3, edition 2, category C3 in environment 2, and to comply with the European directive on EMC (electromagnetic compatibility).

##### Applications

Additional EMC filters are mounted next to the device. They have tapped holes for mounting in an enclosure.

The maximum servo motor cable length conforming to IEC/EN 61800-3 category C3 (1) in environment 2 is 20 m (65.62 ft).

##### Use according to the type of line supply

Integrated or additional EMC filters can only be used on TN (neutral connection) or TT (neutral to ground) systems.

Lexium 28 servo drives cannot be used on IT (impedance grounded or isolated neutral) systems. Standard IEC/EN 61800-3, appendix D2.1, states that on IT systems, filters can cause permanent insulation monitors to operate in a random manner.

If a machine has to be installed on an IT system, an isolation transformer must be inserted in order to re-create a TT system on the secondary side.

## Motor starters

### Presentation

The combinations listed below can be used to create a complete motor starter unit comprising a circuit breaker, a contactor, and a Lexion 28 servo drive.

- GV2P circuit-breaker provides protection against accidental short-circuits, disconnection and, if necessary, isolation.
- LC1 contactor turns on and manages any safety functions, as well as isolating the servo motor on stopping.
- Lexion 28 servo drive controls the servo motor, provides protection against short-circuits between the servo drive and the servo motor, and protects the motor cable against overloads. Overload protection is provided by the servo drive's motor thermal protection.

Lexion 28 servo drive +  
BCH2 servo motor with fuse  
protection

BCH2 with free leads connection

BCH2 servo motor with MIL connectors

### BCH2 servo motors

#### **Presentation**

**BCH2 motors are synchronous AC servo motors.**

- They are equipped as standard with a high-resolution (20-bit) single-turn or multi-turn absolute encoder. They are therefore ideal for high performance applications such as material working, machine tools, etc.
- BCH2 motors are available in six flange sizes: 40 mm (1.58 in.), 60 mm (2.36 in.), 80 mm (3.15 in.), 100 mm (3.94 in.), 130 mm (5.12 in.), and 180 mm (7.08 in.).
- Depending on flange size, the BCH2 motors are supplied with:
  - free leads with connectors
  - or MIL connectors
- BCH2 motors are available with holding brake.
- With the three available types of motor inertia, ranging from low to high inertia, the servo motors can be used in a very wide variety of installations:
  - low inertia: power between 0.2 kW and 1 kW (0.26 hp and 1.34 hp), suitable for textile and packaging applications.
  - medium inertia: power between 0.05 kW and 7.5 kW (0.067 hp and 10.06 hp), suitable for material working and machine tool applications.
  - high inertia: 0.75 kW (1.00 hp) power, suitable for metal working and printing applications.

#### **Examples of applications according to motor inertia type:**

Type of machine	Inertia		
	Low	Medium	High

Special machines	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Winders/unwinders	<input checked="" type="checkbox"/>		

#### **Holding brake**

BCH2 servo motors can be equipped with an electromagnetic holding brake.

**⚠ Do not use the holding brake as a dynamic brake for deceleration, as this will quickly damage the brake.**

#### **Integrated encoder**

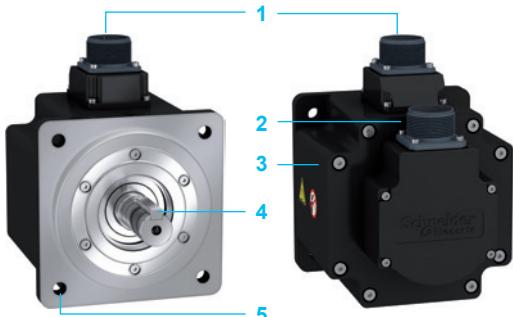

BCH2 servo motors are equipped with a 20-bit single-turn or a multi-turn absolute encoder.

- The encoders measure the motor angular position with a precision of  $\pm 2.6$  arc minutes. The multi-turn absolute encoder also measures the number of motor turns.
- The absolute encoders perform the following functions:
  - providing the absolute position of the motor so that flows can be synchronized
  - measuring the servo motor speed via the associated Lexium 28 servo drive (this information is used by the servo drive's position and speed controller)
  - sending data from the servo motor to the servo drive, it provides automatic identification of the motor when the servo drive starts.

#### **Description**

BCH2 servo motors, with a 3-phase stator and a rotor with rare earth based permanent magnets, consist of:

- 1 Connector for the power cable
- 2 Connector for the encoder cable
- 3 Casing with RAL 9005 opaque black paint coating
- 4 Smooth or keyed shaft end (depending on the model)
- 5 4-point axial mounting flange (Flange is mechanically compatible for mounting with Asian style servo motors).

### BCH2 servo motors

To order a BCH2 servo motor, make up the reference as follows:

Brushless servo motor	B	C	H	2	•	•	••	•	•	•	•	•	•	C

(1) This type is not included in the range of BCH2 motors with multi-turn encoder.

(2) For motors equipped with multi-turn encoder, customer must order related battery accessory, reference: VW3M8BATC and VW3M9BATT..

### Connection components for BCH2 motors

Cables and connectors to be ordered separately, for connection to Lexium 28 servo drives.

Schneider Electric has taken particular care over the compatibility of BCH2 servo motors and Lexium 28 servo drives. This compatibility is only possible when using cables and connectors sold by Schneider Electric. See pages 20 and 21

### Accessories for BCH2 motors

# Lexium 28 & Motors

BCH2 servo motors

Options: holding brake, integrated encoder

Option: GBX●●●●K planetary gearboxes

## Holding brake

### Presentation

If a servo motor has a holding brake, it is necessary to give an appropriate control logic (HBC, Holding Brake Controller), which releases the brake when power is supplied to the servo motor and immobilizes the servo motor shaft when it is stationary.

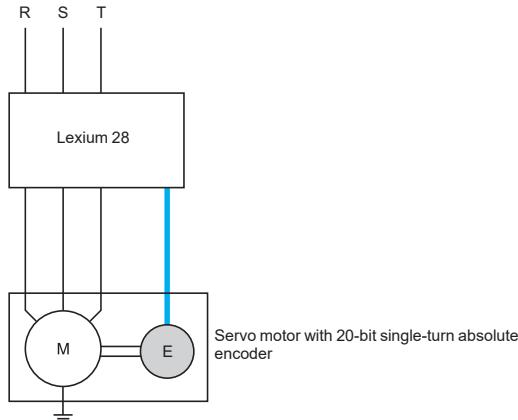

The holding brake controller amplifies the braking control signal (Digital output) transmitted by the Lexium 28 servo drive, so that the brake is deactivated quickly. It then reduces this control signal so as to decrease the power dissipated by the holding brake.

VW3M3103

## Integrated encoder in BCH2 servo motors

### Presentation

The standard measurement device is a 20-bit single-turn absolute encoder integrated in BCH2 servo motors. This measurement device is particularly suited to the Lexium 28 range of servo drives.

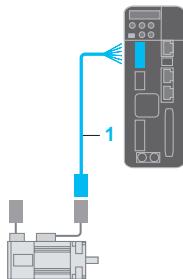

Use of this interface enables:

- Automatic identification of BCH2 servo motor data by the servo drive
- Automatic initialization of the servo drive control loops, thus simplifying installation and drive commissioning at the machine

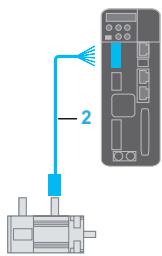

## GBX planetary gearboxes
